

ChillNest Company Profile

Synthetic training company for the ChatGPT for Finance Lab

Business	Markets	Finance focus
DTC cooling blankets	8 countries / 4 regions	DCF-ready growth quality

What ChillNest Does

ChillNest sells breathable, moisture-wicking cooling blankets online across North America, Latin America, Europe, and Asia Pacific. Demand is seasonal and weather-sensitive: heat waves can produce sharp sales spikes, while off-season markets may look weak even when the business is healthy.

How The Business Makes Money

The company generates revenue through its ecommerce site and selected marketplace channels. Growth depends on paid search, social campaigns, influencer partnerships, marketplace promotion, inventory availability, and regional fulfillment economics.

Why Finance Needs More Than Revenue

The lab asks whether growth is durable, profitable, and cash-generative. Some countries show strong demand and healthy contribution profit. Others require caution because returns, logistics costs, FX pressure, inventory investment, or weak marketing efficiency reduce free cash flow.

Why This Case Supports A DCF

A DCF should start from historical revenue, margin, operating expense, working capital, capex, and free cash flow. ChillNest includes country performance, monthly regional trends, operating context, and historical P&L, balance sheet, and cash flow statements so learners can connect operating drivers to forecast assumptions.

Key Learning Themes

Revenue growth is not the same as profitable growth.	Inventory and working capital can turn high demand into lower free cash flow.
Country performance should be reviewed alongside regional trends.	DCF assumptions should be source-backed, labeled, and reviewed by a human.

Note: ChillNest, its data, and its operating notes are synthetic and intended only for training and demonstration.
