

Hands-on AI Enablement

Prompt pack + workflow instructions

AI Enablement Prompt Pack

Reusable prompts and workflow steps for the ChatGPT for Finance and Codex for Marketing demos.

How to use this pack

- Use this PDF as a prompt pack, or follow along through the companion website: [Open the website](#).
- Choose a demo: ChatGPT for Finance or Codex for Marketing.
- Confirm the requirements and download the source files from the companion website.
- Your screen might look different than the facilitator's screen because of your settings or your organization's admin preferences. Don't worry - follow along, and ask if you have questions.
- Follow each workflow in order. Copy the prompts, then iterate based on the output.
- Review generated artifacts. Subject matter expertise and approval always matter.
- Have fun and learn. This is meant to be an interactive, conversational demo.

Learn more about ChatGPT: <https://chatgpt.com/overview/>

Contents

- [ChatGPT for Finance](#): requirements, finance story, lightweight DCF, assumption validation, dashboard, and ownership reminder.
- [Codex for Marketing](#): requirements, campaign brief, visual mood board, production handoff, channel assets, landing page.

ChatGPT for Finance

A short finance demo that starts with raw files, builds a lightweight model, validates assumptions, and prepares a dashboard.

FINANCE

Requirements: Prepare ChatGPT for Finance

A finance brief, lightweight DCF workbook, validated assumptions, and dashboard.

- You will start in ChatGPT with raw company files, move into ChatGPT for Google Sheets or Excel for workbook review, and end with a dashboard plus clear ownership guidance.

Requirements

ChatGPT

- ChatGPT helps you get answers, find inspiration, and be more productive. In this demo, use it to read files, explain performance, and draft finance-ready outputs.
- [Open ChatGPT](#)
- [Pre-review: ChatGPT 101](#)
- [Learn more about ChatGPT](#)

ChatGPT for Excel or Google Sheets

- Install ChatGPT in your spreadsheet app for assumption validation and dashboard workflows. Workflows 1 and 2 start directly in ChatGPT with uploaded files.
- [Install ChatGPT for Excel or Google Sheets](#)

Download ChillNest files

- Download one ZIP with every source file. For Workflow 1, use the company profile, country performance CSV, and operating notes. Use the remaining modeling files in Workflow 2.
- Company profile PDF/TXT: Workflow 1 business context and upload-friendly text.
- Country performance CSV: Workflow 1 data, with revenue, plan, margin, contribution profit, ROAS, returns, logistics, and stockouts.
- Operating notes TXT: Workflow 1 context from Finance, Marketing, Supply Chain, and Support.
- Monthly regional performance CSV: Workflow 2 trend, seasonality, working capital, and free cash flow context.
- Historical statements CSVs: Workflow 2 P&L, balance sheet, and cash flow files for the model.
- [Download finance source ZIP](#)
- [Open finance requirements page](#)

Setup Notes

Note

- Tip: Review everything ChatGPT creates. Treat each workflow as an iterative process: ask for sources, challenge assumptions, refine the output, and keep the final judgment with you.

Note

- Webinar note: The facilitator's screen might look different from yours because of account settings or your organization's admin preferences. Try to follow along and use the webinar chat if you have questions. We will address as many as we can at the right moment in the demo.

FINANCE

Workflow 1: Find the finance story in the raw data

Use the company profile for business context, the country performance file for the numbers, and the operating notes for what likely explains the movement.

Inputs

- Company profile PDF or TXT
- Country performance CSV
- Operating notes from Finance, Marketing, Supply Chain, and Support
- Regional data and historical statements saved for Workflow 2

Outputs

- A short finance brief with a headline and clear bullets
- Favorable and unfavorable drivers by country or region
- Quality-of-growth callouts across revenue, margin, returns, ROAS, and fulfillment signals
- Open verification items, risks, and questions to validate

Workflow Steps

Step 1: Upload three files

Start with the company profile, country performance CSV, and operating notes. Keep the regional and historical files for the next workflow.

Step 2: Paste the prompt below

Use the copy button, then run the prompt in the same ChatGPT conversation.

Create a Short Finance Brief

[Copy prompt on website](#)

Use the uploaded ChillNest company profile, country performance CSV, and operating notes to create a finance brief under 150 words.

Include:

- a one-line headline
- what changed and why
- top favorable and unfavorable drivers by country or region
- quality of growth: revenue, margin, returns, ROAS, logistics, and stockouts
- 1-2 open questions, risks, or items that need human verification

Use the profile for business context, the CSV for numbers, and the notes for likely explanations. Cite the source file or field for material claims.

Step 3: Review the brief

Check whether the story is coherent, source-backed, and useful enough for a finance audience before moving on.

Turn messy raw data into a clear finance story.

- Finance teams are rarely asked to recite rows. They are asked what happened, why it matters, and what leaders should inspect next.

Review Notes

Review

- Human review moment: Ask yourself whether the story makes sense and whether it is coherent with the data. Look for source fields next to numeric claims and notes next to explanations. ChatGPT can save a lot of time by creating the first draft, which is often the slowest part, but every output still needs review, subject matter judgment, and approval before it is used.

FINANCE

Workflow 2: Create a DCF model

Stay in ChatGPT. Upload the remaining historical files, then create a lightweight DCF workbook with a short assumptions tab for the next workflow.

Inputs

- The finance story, short brief, and open questions from Workflow 1
- Monthly regional performance data for trends and working capital context
- Historical profit and loss CSV
- Historical balance sheet CSV
- Historical cash flow CSV

Outputs

- A downloadable workbook with Source Summary, Assumptions To Review, Simple Forecast, and DCF Output tabs
- A five-year free cash flow forecast with formulas
- A short list of 6-8 assumptions to validate later
- Source, rationale, confidence, and review-status fields

Workflow Steps

Step 1: Upload the historical files

Continue in ChatGPT and upload the remaining files: monthly regional performance, historical profit and loss, historical balance sheet, and historical cash flow.

Step 2: Paste the prompt below

Ask ChatGPT to create the workbook directly, not just explain how to build one.

Create the DCF Model

[Copy prompt on website](#)

Using the uploaded Workflow 1 finance brief and historical files, create a downloadable lightweight 5-year DCF workbook for ChillNest.

Use:

- monthly regional performance CSV for trends, seasonality, working capital, and free cash flow context
- historical profit and loss CSV
- historical balance sheet CSV
- historical cash flow CSV

Keep it simple and demo-ready. Create only these tabs:

- Source Summary: short summary of the files and key historical numbers
- Assumptions To Review: 6-8 important assumptions with current value, rationale, source, confidence, and review status
- Simple Forecast: 5-year revenue, gross margin, operating expenses, tax, capex, working capital, and free cash flow
- DCF Output: discount rate, terminal growth, enterprise value, net debt, and implied equity value

Use formulas for the forecast and valuation outputs. Do not create sensitivity tables, scenario tabs, charts, or a dashboard yet.

Make the Assumptions To Review tab easy to inspect because we will validate it in the next workflow.

Step 3: Review the workbook

Download or open the workbook. Confirm outputs use formulas, assumptions are editable, and review fields are visible before moving on.

Turn the finance story into an auditable DCF model.

- Use ChatGPT to create a simple workbook structure, formulas, editable assumptions, valuation outputs, and a clear review path before moving into spreadsheet validation.

Before moving on

- The workbook has formulas, not only pasted values.
- The Assumptions To Review tab has 6-8 clear assumptions with rationale and review status.
- The workbook is simple enough to explain in a live demo.

FINANCE

Workflow 3: Validate assumptions in the workbook

Now try ChatGPT for Google Sheets or Excel. Open the workbook assistant, explain what is in each tab, then validate assumptions and add clickable source links next to the rationale.

Inputs

- The DCF workbook from Workflow 2
- Assumption, rationale, and review-status fields in the workbook
- The Workflow 1 finance story, brief, and open questions
- ChatGPT for Google Sheets or Excel

Outputs

- A plain-English explanation of what each workbook tab contains
- Validated assumptions with recommended updates where needed
- A clickable external source link column next to each rationale
- Confidence, as-of date, and human review status for each assumption

Workflow Steps

Step 1: Open ChatGPT for Google Sheets or Excel

Use this workflow to try the spreadsheet assistant. In Google Sheets, click Extensions. In Excel, click Plugins. If you still need the add-in, use the install link before continuing.

- [Learn how to download and install ChatGPT for Excel or Google Sheets](#)

Step 2: Explain each tab

With the workbook assistant open, run the prompt below to orient yourself before changing assumptions.

Explain Workbook Tabs

[Copy prompt on website](#)

Give me a quick overview of this workbook and each tab's content.

Step 3: Validate assumptions and add source links

Ask ChatGPT to review the assumptions tab and add external source links in the right column.

Validate Assumptions

[Copy prompt on website](#)

Review the @assumptions in the assumptions tab. Make sure all of them make sense and add a link to an external data source supporting each claim in column M.

Use the workbook assistant to inspect tabs and validate assumptions.

- The goal is to keep validation close to the model: understand the workbook structure, check the assumptions, and make source-backed updates visible in the sheet.

Review Notes

Review

- Human review moment: A clickable source link is not the same as approval. Open and review all sources. Read them through, use your subject matter expertise to make sure they make sense, and update the review-status fields.

FINANCE

Workflow 4: Create a finance dashboard

Move back into the workbook. Apply the approved assumption updates, then turn the model into a dashboard a Finance reviewer can scan quickly.

Inputs - The DCF model from Workflow 2 - Approved assumption updates from Workflow 3 - Regional trends and country priority outputs - Any placeholder KPI definitions you want to teach	Outputs - KPI panels for Revenue, Gross Margin, Burn Rate, Runway, and Budget vs. Actual - At least three visuals for trends, scenarios, or valuation sensitivity - Clear labels for source-backed, calculated, validated, and placeholder metrics - A short leadership brief with risks, questions, and decisions needed
---	---

Workflow Steps

Step 1: Apply approved updates

Apply the approved assumption updates and source-link fields from Workflow 3 before creating the dashboard.

Step 2: Paste the prompt below

Ask ChatGPT to create the dashboard layout, visuals, metric labels, and leadership brief.

Create the Dashboard

[Copy prompt on website](#)

Create a review-ready dashboard from the updated ChillNest DCF.

Use clean panels for:

- Revenue
- Gross Margin
- Burn Rate
- Runway
- Budget vs. Actual

Add views for regional trends, country priorities, DCF valuation, scenarios, assumption review, and top takeaways.

Include at least 3 visuals. Label each metric as source-backed, calculated, externally validated, or placeholder.

If a KPI is not meaningful, mark it "Not applicable." If data is missing, mark it "Placeholder - needs source data."

Finish with a concise leadership brief using favorable / unfavorable language: recommendation, risks, open questions, and decisions needed.

Step 3: Check every KPI label

Confirm each metric is marked as source-backed, calculated, externally validated, placeholder, or not applicable.

Step 4: Review the brief

Make sure the summary separates what happened, what changed in the model, and what leaders need to decide.

Turn the updated model into a scannable dashboard.

- The goal is fast decision support. Leaders should see the core KPIs, scenario impact, assumption status, risks, and decisions needed without hunting through the model.

Review Notes

Review

- Design check: The best dashboard is honest. Placeholder metrics are useful for layout, but they must be visually labeled so nobody mistakes them for actual company data.

Ownership and accountability

- Ownership reminder: This is an iterative process. ChatGPT can accelerate the first draft, model structure, labels, and summary, but Finance owns the numbers, assumptions, judgment, and final recommendation. Review the output, ask follow-up questions, revise weak spots, and only share what you can explain and defend.

Codex for Marketing

A customer-facing marketing demo that turns messy campaign context into a brief, mood board, handoff, assets, and landing page.

MARKETING

Requirements: Prepare Codex for Marketing

Make sure to go through the following requirements before starting the demo.

A campaign brief, mood board direction, production handoff, channel assets, and landing page.

- Expect a hands-on marketing workflow. Codex will work across the campaign folder, draft structured deliverables, and help turn messy source material into launch-ready campaign artifacts.

Requirements

Codex

- Think of Codex as your AI teammate for working across files. In this demo, it will read the campaign folder, draft deliverables, and help create a previewable page.
- [Download Codex or learn more](#)

Download Campaign Source Files

- Download one ZIP with only the customer-facing source material for this demo: campaign notes, data, and visual references.
- Campaign notes and data: launch notes, stakeholder chatter, product facts, claims rules, customer voice, reviews, survey, and channel asks.
- Visual references: simple Chill Nest brand and product cards for moodboard and landing-page direction.
- [Download marketing source ZIP](#)

Unzip and open the folder

- Unzip the file, then open the `Campaign Source Files` folder as the working folder in Codex.

Setup Notes

Note

- Webinar note: The facilitator's screen might look different from yours because of account settings or your organization's admin preferences. Try to follow along and use the webinar chat if you have questions. We will address as many as we can at the right moment in the demo.

MARKETING

Workflow 1: Create the campaign brief

Start with the messy Chill Nest Campaign Source Files. Let Codex read across the whole folder, find the signal, and turn the scattered context into a brief a marketing lead could use.

Inputs

- Messy launch notes and stakeholder chatter
- Product truths, brand voice, and claims guardrails
- Survey, review, and customer voice data
- Channel asks, inventory, margin, and timing constraints

Outputs

- A clear campaign summary and objective
- Audience, insight, message ladder, and proof points
- Open questions, tensions, and approval needs
- Claims guardrails carried into the next workflow

Workflow Steps

Step 1: Open the Campaign Source Files in Codex

Use the unzipped folder as the working folder so Codex can read the campaign notes, data, and visual references together.

Step 2: Paste the prompt below

Use this prompt to orient Codex to the company, source files, and campaign brief task.

Brief From The Mess

[Copy prompt on website](#)

We are Chill Nest, a cooling bedding brand preparing a new summer marketing campaign.

This folder has several messy source files that should inform the campaign brief:

- 00_whats_in_the_pile.md: a map of the folder and known conflicts
- 01_launch_brain_dump.md: launch notes, timing, audience ideas, and early messaging
- 02_product_truths.md: product names, facts, features, pricing, and approved product language
- 03_brand_vibe_and_voice.md: brand voice, visual direction, and tone to avoid
- 04_words_we_can_and_cant_say.md: claims rules, review-needed language, and prohibited claims
- 05_team_chatter_dump.md: stakeholder comments, disagreement, and ambiguity
- 06_customer_voice_clips.md: qualitative customer research notes
- 07_market_peek.md: rough competitor and market context
- 08_channel_asks_and_deadlines.csv: channel asset needs, owners, and timing
- 09_sleepy_summer_survey.csv: survey responses from target-adjacent consumers
- 10_review_grab_bag.csv: customer reviews, language, and recurring themes
- 11_inventory_margin_reality_check.csv: promo, margin, and inventory constraints
- visual_references/chill_nest_brand_card.svg: brand visual cues
- visual_references/chill_nest_product_reference.svg: product visual reference

Read across the folder and create a sharp, review-ready campaign brief as a Word document (.docx). First make sense of what we have, then call out tensions, missing pieces, and claims we should be careful with.

Step 3: Tighten the brief

Use a second pass to make the brief more specific before moving into creative.

Tighten The Brief

[Copy prompt on website](#)

Now pressure test the brief. What is vague, overclaimed, missing, or too generic?

Rewrite it for a professional audience as a brief that will be handed off to create a marketing campaign from scratch.

Include:

- a 2-sentence recommendation at the beginning
- campaign summary
- objective
- user value proposition
- target audience
- key channels
- claims or approval risks
- open decisions before creative starts

Make it tighter, clearer, and more useful for the team that will build the campaign.

Create the output as a polished Word document (.docx).

Turn scattered inputs into a campaign brief.

- The goal is not to generate copy yet. The goal is to make sense of the campaign: audience, offer, product truths, message, tensions, and claims risk.

Review Notes

Review

- Human review moment: Ask Codex to show what came from the files versus what it inferred. The brief should be useful, but it should not hide uncertainty. Remember that building with Codex is a cycle: prompt, review the output, then iterate until the work is clear enough to use.

MARKETING

Workflow 2: Turn the brief into a visual mood board

Now that the strategy is clear, use Creative Production with the brief and provided images to create a visual direction mood board for the summer campaign.

Inputs

- The campaign brief from Workflow 1
- Provided brand and product reference images
- Brand voice and visual style guidance
- Claims guardrails and customer language
- The audience insight, user value prop, and message ladder

Outputs

- A visual direction mood board for the summer campaign
- Visual mood, texture, photography, and color direction
- Notes that connect the visuals back to the brief
- Guidance on what to avoid so the work stays on brand

We will use Creative Production for this workflow.

- A plugin adds reusable workflows, skills, app connections, or other tools to Codex. In this step, call Creative Production with @Creative Production so Codex can turn the brief and images into a mood board.
- You can review available plugins from the plugin tab before starting.
- [Learn more about Codex plugins](#)

Workflow Steps

Step 1: Review the brief

Confirm the brief has a clear audience, insight, product story, and claims boundaries.

Step 2: Paste the prompt below

Start by calling the Creative Production plugin with @, then ask for a visual direction mood board.

Brief To Mood Board

[Copy prompt on website](#)

@Creative Production

Based on our brief and the images provided here, create a visual direction mood board for our summer campaign.

Show the recommended mood, visual language, color, texture, photography style, and a short rationale for why this direction fits Chill Nest.

Step 3: Answer clarifying questions if asked

If Creative Production needs more inputs, it may open a panel with clarifying questions. If the brief and images are already clear, it may skip this and move straight into the mood board.

Move from strategic brief to visual direction.

- A useful mood board gives the team shared visual choices and constraints. It should make the campaign easier to recognize, review, and produce.

Review Notes

Review

- Human review moment: Pick the direction that best fits the brief. Codex can explore options quickly, but the team still decides what has the right tone and brand fit.

MARKETING

Example output: visual mood board

This is one example of what the mood-board output can look like. Each user's output will look different based on the files, prompt, plugin response, and choices made while reviewing.

Chill Nest Ad Visual Direction Mood Board

12 single-frame ad-use visual references for Sleep Cool. Wake Ready across paid social, crea...

MARKETING

Workflow 3: Turn the mood board into a production handoff

A creative direction becomes useful when every team knows what to make, how it should feel, which variants matter, and where review is required.

Inputs

- The chosen visual mood board and rationale
- Channel asks and deadline constraints
- Brand voice, visual references, and claims guardrails
- Audience insight and offer strategy

Outputs

- Asset list and variant plan
- Visual and copy direction by team
- Review checkpoints and open approvals
- Claims watch-outs carried into production

Workflow Steps

Step 1: Choose the mood board direction

Tell Codex which territory is moving forward, or ask it to recommend one and explain the tradeoff.

Step 2: Paste the prompt below

Use this to create a short production handoff that is easy to review in a live demo.

Mood Board To Handoff

[Copy prompt on website](#)

Turn the chosen visual mood board direction into a simple production handoff.

Keep it short and demo-ready. Create a one-page handoff with:

- campaign direction: 2-3 bullets on the idea and why it fits
- asset checklist: landing page hero, Meta static ad, Google display banner, email header, and organic social post
- visual direction: color, imagery, layout, and product treatment
- copy direction: headline tone, CTA, and words to avoid
- review watch-outs: claims, approvals, or missing inputs

Use concise bullets. Do not create the final assets yet.

Step 3: Check usefulness

A handoff should answer what to make, why it matters, and what must be reviewed before launch. Subject matter expertise and judgment are critical before teams use it for production.

Translate creative direction into production instructions.

- This is the bridge between strategy and execution: design, copy, paid media, lifecycle, and creators should all be able to work from the same direction.

MARKETING

Workflow 4: Draft the first channel assets

Use the approved campaign direction to create channel-native starting points. The goal is not final copy. The goal is a first set the team can review and refine.

Inputs - The campaign brief and chosen mood board direction - The production handoff and channel asks - Claims rules, product proof, and review snippets - The offer and landing-page role in the campaign	Outputs - Search and display ad copy - Meta feed, story, and Reels variants - TikTok creator hooks - Email starters, landing-page copy, and image prompts
--	---

Workflow Steps

Step 1: Keep the context in the same thread

Codex should still have the brief, creative direction, and production handoff available.

Step 2: Paste the prompt below

Ask for a starter kit across the channels a marketer would naturally need.

Handoff To Channel Assets

[Copy prompt on website](#)

Using the brief and handoff, draft a first-pass channel kit: search ads, display copy, Meta feed/story/Reels variants, TikTok creator hooks, email subject lines and preview text, landing page hero copy, and image prompts. Keep the voice consistent, stay inside the guardrails, and flag anything that needs review.

Step 3: Review channel fit

Run one revision pass so each asset feels native to its channel.

Channel Fit Pass

[Copy prompt on website](#)

Do a channel-fit pass. Keep the campaign idea, but rewrite anything that feels pasted across channels. Make each channel feel native, and flag claims or lines that need review.

Scale one idea across paid, lifecycle, social, and web.

- Codex can preserve the campaign spine while adapting tone and format to different channels. This shows why the brief and handoff matter.

Review Notes

Review

- Human review moment: Check whether every channel still sounds like the same campaign. If one channel drifts, ask Codex to revise it against the brief and guardrails.

MARKETING

Workflow 5: Create the promotion landing page

Close the loop by asking Codex to turn the campaign kit into a responsive page the team can preview. This shows how the handoff can become a concrete draft.

Inputs

- The campaign brief, mood board direction, and handoff
- The channel kit and image prompts
- Product facts, offer details, reviews, and FAQs
- Brand and claims guardrails

Outputs

- A responsive landing page preview
- Hero, offer, proof, review, FAQ, and CTA sections
- Visual styling aligned to the creative direction
- Review notes for claims and final human approval

Workflow Steps

Step 1: Keep the campaign context

Run this after the channel kit so Codex can reuse the brief, creative direction, and campaign assets.

Step 2: Paste the prompt below

Ask Codex to create something previewable, not just a written recommendation.

Promotion Landing Page

[Copy prompt on website](#)

Turn the campaign kit into a promotion landing page I can preview. Use the chosen creative direction, include the offer, product proof, reviews, FAQs, and clear CTAs, and make it responsive. Keep the page ready for review, and mark anything that still needs human approval.

Step 3: Inspect the page

Review mobile fit, visual hierarchy, CTA clarity, claims language, and whether the page matches the campaign direction.

Turn the campaign kit into a page people can inspect.

- The landing page should carry the same strategy, voice, offer, proof, and visual direction from the earlier workflows.

Before moving on

- The page works on desktop and mobile without overlapping text.
- Claims stay inside the approved guardrails or are clearly marked for review.
- The page feels like the chosen mood board direction, not a generic ecommerce template.

Review Notes

Review

- Human review moment: Codex can draft the first page quickly. Marketing still owns the taste, claims, offer, conversion logic, and final launch decision.
